

# Project Idea

Monday, October 3, 2016 10:49 AM

A web app to help people study.

People can remember pictures much more easily than words and thoughts.

If you can tie words and thoughts to pictures, they become much more easy to remember

If you try to remember this list, it can take some efforts.

Red, blue, green, yellow, purple, orange, green.

Which color is missing?

Similar to the idea of a memory palace used by competitive memorizers. But also includes a written component which increase memorization further.

You did not have to remember the sequence, but you knew.

The idea is to let students choose a picture to associate their notes with.  
Then the text can be hidden and they can quiz themselves.  
This speeds up the memory formation process.

The pictures will be bigger so they can take more in depth notes with more writing. The visual cues will help them retain what they are studying faster.
